EDUCATION

Georgia Institute of Technology
Masters of Science in Computer Science

Atlanta, GA
Expected May 2027

University Of Georgia
Bachelor of Science in Computer Science

Athens, GA
May 2024

TECHNICAL SKILLS

Languages: C#, Java, Python, JavaScript, C/C++, HTML/CSS, SQL

Frameworks: React, Node, Express, Bootstrap, Blazor, Material-UI, Angular

Developer Tools: Git, Docker, Kubernetes, VS Code, Visual Studio, PyCharm, Figma, Office 365, MongoDB, Bash

Libraries: Pandas, NumPy, Matplotlib, bUNIT, SCSS, jUNIT

EXPERIENCE

Software Engineer

Jan 2026 – Present

Charles Schwab

Southlake, TX

- Designed and shipped a production event-streaming pipeline for a backend service, enabling near-real-time data flow to downstream consumers using Kafka.
- Built and launched a new REST API on a multi-tenant backend service, expanding it to support additional product lines without disrupting existing consumers.
- Hardened multiple production services by standardizing logging, improving observability and unlocked end-to-end testing weeks ahead of upstream dependencies.
- Created an automated agent for team-specific standards/workflows and created different acceptance plans for production release documentation.

Software Engineer

July 2024 – Jan 2026

402d Software Engineering Group (SWEG) - Robins AFB

Warner Robins, GA

- Designed and developed full-stack cloud applications for the USAF using React, Blazor, C#, .NET, and MongoDB, improving application efficiency by 15% and reducing technical debt for the Air Force.
- Collaborated cross-functionally with stakeholders, engineers, and product teams to align software solutions with DoD security and compliance standards
- Led Agile ceremonies including daily standups, sprint planning, and retrospectives, driving a 25% improvement in team efficiency and fostering a culture of continuous improvement
- Utilized CI/CD pipelines using Docker and Kubernetes, streamlining deployment processes and enhancing system reliability

PROJECTS

AI Coach — Personal LLM Agent | *Python, FastAPI, Claude API, SQLite, Google Health API*

2025

- Built an autonomous LLM agent (Anthropic Claude) with a multi-step tool-use loop over six SQL-backed tools, integrating Google Health API biometric data via an OAuth 2.0 ETL pipeline into SQLite.).
- Implemented cross-session memory/state management and reduced inference cost to 0.015/query via prompt caching and thinking-budget tuning.
- Drove eval-driven development with a rubric-scored evaluation suite plus 39 pytest tests, catching regressions before merge.

ISTA — AI-Agentic Options Trading System | *Python · FastAPI · React/TypeScript · Claude Model*

2025

- Architected an autonomous, agentic AI trading system that uses a large language model (Claude) tool-use loop as the decision engine to screen equities, score conviction, and stage long-call options orders across a configurable watchlist — built on an async Python/FastAPI backend with a real-time React dashboard.
- Engineered a quantitative signals engine in NumPy/SciPy computing Black-Scholes Greeks, Implied Volatility Rank/Percentile, RSI, MACD, ATR, and momentum
- Implemented a Retrieval-Augmented Generation (RAG) pipeline (ChromaDB vector store, sentence-transformer embeddings, PDF ingestion + chunking)
